

ENTRANCE GATES WITH ELECTROMAGNETIC FASTENER

SW 027.10 – left-side
SW 027.20 – right-side

Entrance gates with electromagnetic fasteners are used for controlling the entrance and exit of people. It can be used with access control systems opens in one direction only.

The gate can be opened after receiving an electrical signal, after which it closes automatically.

Powered by safety transformer with 6V secondary voltage and 2x0.5mm² power cable connected to the post with the fastener.

For longer distances (~20 mb) verify that voltage at the fastener is 6V and does not exceed 12V.

The gate is made of steel and coated with nickel chromium. Only to be used in closed areas. The gate is to be mounted to firm floors with three Ø8x120 screws and Ø12x100 pegs. The post with the fastener is also mounted in a similar way. Weight of the gate – 11.5 kg. Weight of the post – 5 kg.
